

I drive a truck for a living like most of the xm listeners and i'm apposed to HB4026. The instant weather and traffic is extremely useful to my driving career and are necessary to do my job safely and effectively. While driving I need the information "now" when i'm planning my way into or through a major city. In my opinion it is a much needed service and would like to see more cities added to the list to make traffic congestion a thing of the past.
